1. Claims 1-6 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record neither discloses nor suggests a) an optical disk device having a combination limitations structural including a main chassis; a disk tray movable in a direction protruding from said main chassis and in the opposite direction so as to carry said optical disk in or out of said main chassis; a turntable that rotates said optical disk carried- in by said disk tray; a traverse chassis that supports said turntable, said traverse chassis being supported by said main chassis so that said traverse chassis is swingable between a holding position in which said turntable is able to hold said optical disk and a retracting position retracting from said holding position; an optical pickup that performs recording or reproducing of a signal on said optical disk rotated by said turntable; a common motor that generates a driving force for feeding said optical pickup, for swinging said traverse chassis, and for moving said disk tray; a first gear that rotates by a driving force of said motor; a second gear that rotates by transmission of rotation from said first gear; a rack portion integrally formed with said optical pickup, said rack portion engaging said first gear to move, an engagement between said rack portion and said first gear being released when said rack portion reaches a predetermined engagement-releasing area; a slide rack relatively movable with respect to said rack portion, said slide rack engaging said first gear to move; a slider member having an engaging portion capable of engaging said second gear and a cam portion that causes said traverse chassis to swing between said holding position and said retracting position; and a trigger member that moves in conjunction with said slide rack in a state

where said engagement between said rack portion and said first gear is released, so as to move said slider member to a position in which said slider member engages said second gear, wherein said first gear and said second gear have the same number of teeth, and the rotation is transmitted from said first gear to said second gear so that the ratio of the number of rotations of said first gear to the number of rotations of said second gear is 1:1, as set forth in claim 1; b) an optical disk device having a combination limitations structural including an optical pickup that performs recording or reproducing of a signal on an optical disk; a pickup driving mechanism including a rack portion integrally formed with said optical pickup, said pickup driving mechanism causes said optical pickup to move between an outer peripheral position and an inner peripheral position of said optical disk; a motor for driving said pickup driving mechanism; a worm gear fixed to an output shaft of said motor; and a gear having a smaller gear portion that engages said rack portion, and a larger gear portion coaxial with said smaller gear portion and engaging said worm gear, wherein said larger gear portion is composed of a spur gear, and a rotation axis of said worm gear is inclined with respect to a rotation axis of said larger gear portion at an angle corresponding to a lead angle of said worm gear, as recited in claim 6.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
